

Release Notes

Public Release

Version 1.0.2	
Features	- Updated Valens to 7.5.21. - Added support for the AT-OCS-900N. - Added the option to configure the HDMI +5V pin to either remain constantly high or activate only when a signal is detected. - Added the option to keep USB VBus always high or to automatically toggle it on or off depending on the presence of a USB host. - Added EDID support for displays with 21:9 aspect ratios. - Added a setting that forces the 7-port virtual USB hub to always enumerate, even without a connected device.
Bug Fixes	- The “Auto Display Control Off” feature was not functioning correctly. - The Display Control character limit was not properly enforced; it now supports up to 100 characters. - The RX Type was not being reported correctly. - Bulk-type USB peripherals were not enumerating properly.
Known Issues	Logitech Sync will not discover peripherals connected over HDBT. Contact technical support for further assistance.

Previous Releases

Version 1.0.1	
Features	Improvements to compatibility with AT-OME-SR21 with respect to USB switching.
Bug Fixes	- Resolved issue where setting a static IP address would cause the unit to be set to an IP address of 255.255.255.255. - Resolved issue where baud rate settings would not be retained after power cycle. - Resolved issue where HEX commands are erroneously truncated for display control.
Known Issues	None.
